

JESUINO AZEVEDO

Senior Solutions Architect | Enterprise & Cloud Architecture | Digital Transformation | Critical Infrastructure
Auckland, NZ 021 917769 jesuino.azevedo@gmail.com Available immediately NZ Citizen
linkedin.com/in/jesuinoazevedo/ github.com/xpto2000/ jesuinoazevedo.com

I am a senior technology leader with 20+ years across complex, multi-site environments. Background covers end-to-end technology ownership, architecture, vendor governance, and large platform adoptions. Strong at assessing landscapes quickly, getting governance in place, and shipping measurable outcomes, including a COVID response that earned formal Board recognition. Most recent enterprise work in regulated energy, public sector infrastructure, and multi-entity commercial groups.

KEY ACHIEVEMENTS

Solutions Architect on Vector's digital grid initiative with Google (Alphabet X). Established the architecture runway across cloud, integration, and data layers in a regulated energy environment.	Delivered \$2M+ annual OPEX savings through platform modernisation, vendor rationalisation, and governance-led optimisation across 8 companies spanning NZ and Australia.
Architected a fully paperless digital ecosystem achieving 95%+ customer satisfaction, increased conversion rates, and measurably reduced cost-to-serve, adopted as a benchmark by major NZ corporates.	Reduced significant incidents by 77% over 18 months and delivered \$7M+ cumulative OPEX savings through process improvement, vendor consolidation, and DevOps transformation.

CORE COMPETENCIES

Leadership & Strategy	Architecture & Governance	Technology & Delivery
- Technology Transformation - Architecture Runway & NFRs - Multi-Site Operations - Executive Engagement - Operating Model Design - Budget Ownership \$10M+	- Enterprise Architecture - Architecture Governance & NFRs - Technology Roadmapping - Integration & API Architecture - Cloud Architecture (AWS, GCP) - Data Platform Strategy	- DevOps & CI/CD Pipelines - Infrastructure as Code - Salesforce Snowflake AWS - Agile & Waterfall Delivery - Vendor Negotiation & Management - System Integration & Automation

PROFESSIONAL EXPERIENCE

Career Break | Latin America

Sep 2023 – Mar 2026

Overview: Combined travelling across 40+ countries with active engagement in AI engineering, cloud architecture, and advisory. Returned to NZ in the end of March 2026 with shipped builds and renewed focus. Available immediately and ready to lead complex technology programmes.

- Advisory:** Supported startups on cloud-native platforms and MVP architectures (AWS, microservices). Informal advisory to a NZ vendor preparing to upgrade their solution for government clients, covering people, process, and technology.
- Hands-on AI and cloud:** Built and shipped two AI apps: AI Finance Agent NZ (CrewAI multi-agent, Groq LLaMA, Streamlit) and a RAG Document Assistant (OpenAI/Anthropic APIs, Qdrant vector DB, Streamlit Cloud) covering ingestion, embeddings, retrieval, and grounded generation with cost controls. Also built an orbital flight physics simulator (Canvas, 60Hz integration). Personal site at jesuinoazevedo.com on Jekyll and GitHub Pages with architecture case study. Code at github.com/xpto2000.
- Currency:** Returned with momentum, current AI tooling experience, and a clear focus on large-scale technology leadership.

Solutions Architect | Vector Limited, Auckland

Mar 2021 – Sep 2023

Overview: I shaped enterprise application and technology architecture for Vector's partnership with Google (Alphabet X), working on next-generation electricity grid platforms. I owned architecture governance, cross-domain design, and technical alignment across a complex, mission-critical environment.

Architecture Strategy & Roadmapping: Defined target-state architecture and multi-year technology roadmaps aligned to business objectives, establishing clear NFRs and architectural standards that guided delivery teams across cloud, integration, and application domains, reducing duplication and improving delivery consistency across the group.

- **Architecture Runway, Data & Cloud:** Defined the architecture runway for Vector's digital grid initiative with Google, covering data platform design and multi-cloud (AWS/GCP) architecture. Provided governance and scalability foundations across the programme. Sat alongside the AI workstream rather than leading it.
- **Cross-Domain Governance & NFR Leadership:** Established architecture governance frameworks, defined non-functional requirements, and delivered cross-domain architectural patterns that improved solution quality, accelerated decision-making, and enabled teams to operate with greater autonomy and confidence.
- **Stakeholder Alignment & Influence:** Turned complex business requirements into clear architectural direction for executive, delivery, and vendor teams. Influenced outcomes without direct authority across a large, cross-functional organisation and kept all parties aligned through major transformation milestones.

Digital Transformation & Services Manager | Vector Limited, Auckland

Mar 2019 – Mar 2021

Overview: I led digital transformation across 8 companies in NZ and Australia, covering over 1,000 users across 30+ locations. Owned critical technology delivery and investment decisions during a high-pressure period, maintaining governance, cost discipline, and executive alignment.

- **COVID Response & Board Recognition:** Delivered a fully remote digital workplace enabling operational continuity across critical infrastructure, gas and electricity, during COVID, including rapid rollout across all sites in a regulated environment. Earned formal Board recognition for execution quality and leadership under pressure.
- **Cost Optimisation & Investment Governance:** Delivered \$2M+ annual savings through platform modernisation and vendor rationalisation, applying strong governance to all spend decisions. Prioritised investments based on value and risk, balancing innovation with cost efficiency across the group.
- **Transformation Leadership & Change Governance:** Partnered with executive stakeholders to define and lead large-scale digital transformation initiatives, aligning platform strategy with business priorities. Established change governance processes and drove organisation-wide adoption across all 8 business entities, ensuring consistent rollout across locations with minimal operational disruption.
- **Execution & Strategic Alignment:** Delivered initiatives end-to-end, turning strategy into outcomes. Built strong executive relationships and communicated clearly across technical and business audiences, making sure investments landed.

End-User Compute & Collaboration Manager | Vector Limited, Auckland

Jun 2018 – Mar 2019

Overview: I was accountable for the budget, architecture, reliability, and full lifecycle of end-user and collaboration platforms supporting 1,000+ staff across 30+ locations in NZ and Australia. Delivered a resilient foundation for all 8 businesses.

- **Workplace Transformation:** Led the shift from a 90% desktop to a fully mobile, laptop-based workforce, preparing the organisation for large-scale remote operations, scaling platforms for a distributed user base, and modernising the end-user experience across all sites and business entities.
- **Platform Strategy & Service Ownership:** Defined and owned the platform strategy for end-user compute and collaboration services, establishing a resilient and secure digital workplace foundation across 8 companies. Maintained full accountability for service delivery, reliability, and improvement across the portfolio.
- **Financial Stewardship:** Oversaw strategic allocation and optimisation of a technology budget exceeding \$10 million, balancing innovation investment with operational cost efficiency across a multi-entity group, applying the same commercial discipline carried forward into the Digital Transformation & Services Manager role.
- **Vendor Governance:** Managed a portfolio of 10+ tier-one vendors, applying structured governance frameworks to drive performance, accountability, and commercial value across mission-critical service contracts, negotiating terms that improved cost and delivery outcomes for the group.

2IC Infrastructure Manager & DevOps Team Lead | Vector Limited, Auckland

Oct 2015 – Jun 2018

Overview: I was 2IC for the Infrastructure portfolio, leading a vendor-based DevOps team of over 100 people across NZ's largest energy provider. Accountable for the performance and 24/7 availability of enterprise server, storage, virtualisation, and network environments.

- **Operational Excellence:** Developed and executed a process improvement strategy that reduced significant incidents from 36 to 8 per year (77% over 18 months) by introducing structured governance, clear escalation paths, proactive monitoring, and a measurable shift in team accountability and performance culture.
- **Commercial Optimisation:** Achieved over \$1M in annual OPEX savings (over \$7M cumulative) through vendor consolidation, contract negotiation, automation, and modernisation of the technology stack.
- **DevOps & Agile Delivery:** Led a vendor-based team in implementing CI/CD pipelines, Infrastructure as Code (IaC), and automation practices across the infrastructure portfolio, driving a culture shift toward reliable, automated delivery, reducing manual toil, and enabling faster, more consistent deployments.
- **Infrastructure Ownership:** Managed the full service lifecycle for all server, virtualisation, network, and performance optimisation layers, ensuring 24/7 availability and system reliability for critical operational systems supporting NZ's energy network across multiple sites and environments.

Overview: I architected and built Salesforce-based digital solutions that received multiple industry awards and were adopted as benchmarks by major NZ corporates. Designed fully integrated enterprise platforms connecting customer, operational, and back-office systems into a paperless ecosystem.

- **Solution Architecture & System Integration:** Designed the end-to-end digital platform integrating Salesforce, SAP, and field service systems, connecting web, mobile, and backend systems into a cohesive enterprise solution that eliminated data silos and enabled consistent visibility across sales, service, and fulfilment workflows.
- **Paperless Platform & Process Automation:** Architected a fully paperless digital ecosystem and delivered automated workflows that reduced cost-to-serve, improved operational efficiency, and supported rapid business growth without proportional cost increase, later adopted as a reference model across major NZ corporates.
- **Customer Outcomes:** Achieved 95%+ customer satisfaction scores through improved digital experience, faster service response, and integrated system design, with measurable increases in conversion rates and reductions in customer handling costs across the business.

Head of Technology | Madeira Ports (APRAM), Portugal

Oct 2004 – Oct 2013

Overview: I managed mission-critical technology supporting maritime logistics and port operations in a regulated public sector environment. Delivered 99.99% uptime across high-pressure transport systems for 400+ users while optimising OPEX and CAPEX over nine years.

- **Architecture Ownership:** Defined and maintained core technology architecture supporting national port operations, including maritime logistics, vessel management, and regulatory reporting. Managed SAP administration, enterprise integrations, and infrastructure in a complex, regulated environment.
- **Service Reliability & System Performance:** Sustained 99.99% uptime across mission-critical infrastructure through process improvement, redundancy design, and proactive monitoring. Maintained system reliability under demanding availability requirements in port operations.
- **Vendor & Technology Governance:** Managed vendor relationships and governed ICT investment decisions over nine years, delivering solutions within strict security, compliance, and public sector frameworks, balancing operational agility with regulatory accountability.
- **Technology Strategy:** Aligned ICT investment with public sector mandates and operational priorities over nine years. Built and evolved long-term technology capability within a tight budget.

EDUCATION & QUALIFICATIONS

Master's in Computer Science (Enterprise Architecture & SOA) | Universidade da Madeira 2010

Bachelor's in Information Technology | Coimbra University 2000

Previous Certifications (renewing):

AWS Certified Solutions Architect | Project Management Professional (PMP), PMI | Microsoft Certified Solutions Associate (MCSA) | Certified Scrum Master, Scrum Alliance

Current Qualifications:

He Papa Tikanga (Kaupae 3), Wānanga o Aotearoa | TOGAF-aligned enterprise architecture practice

EARLIER CAREER

Startup Co-Founder (Mega eXitus, CRM software, 2007-2013) | IT Consultant | SAP FI Implementation | Network & Systems Administrator | IT Retail Business Director | Computer Science Teacher (Years 10-12)

LANGUAGES & OTHER

Fluent: English, Portuguese, Spanish |

Working knowledge: Italian, French

Community: Active volunteer, Forest & Bird, Auckland Regional Parks, Ark in the Park, donating blood and plasma.
