NZ Citizen

Education

Master's in Computer Science

Madeira University

Bachelor's in Information Technology

Coimbra University

Qualifications

AWS Certified Solutions Architect

(renewal in progress)

Certified Scrum Master

He Papa Tikanga (Kaupae 3)

Wānanga o Aotearoa

Core Skills

Architecture & Governance

Solution Architecture • Target State Architecture • Architecture Runway & NFRs • Microservices • Domain-Driven Design • Integration & API Architecture • Cloud Architecture (AWS, GCP) • TOGAF • AWS Well-Architected • Enterprise Transformation

AI/GenAI & Innovation

AI/GenAI Architecture Standards • RAG & Vector Databases • LLM Application Design • Governance: Integration, Monitoring, Security, Privacy • Cost Controls • Reference Architectures • AI Strategy • Generative AI

Leadership & Delivery

Architecture Review Board • Stakeholder Influence • Vendor Governance • Web Platform Strategy • Consumer Digital Products • Agile Delivery • Team Building • Executive Communication

Languages

Fluent: English, Portuguese, Spanish

More details

About me

I'm a Senior Solutions Architect with more than 20 years of technology leadership across complex, multi-site and regulated environments, including a decade in New Zealand's energy sector. My expertise includes target-state architecture, integration design, and AI/GenAI governance. At Vector, where I worked for more than nine years across multiple roles, I most recently established the architecture runway for the Google/Alphabet X digital grid programme, focusing on cloud, integration, and data layers. Previously, I architected a Salesforce-based consumer digital ecosystem that became a benchmark for major New Zealand corporates. I bring hands-on AI tooling experience alongside enterprise-scale design capability.

Sector experience: energy & utilities, critical infrastructure, public sector.

Key Achievements

- **Vector × Google (Alphabet X) Digital Grid:** Solutions Architect on Vector's digital grid initiative with Google (Alphabet X). Established the architecture runway across cloud, integration, and data layers in a regulated environment.
- **ML Predictive Maintenance:** Designed an ML solution on SAP asset data shifting grid maintenance from reactive to predictive, reducing electricity outages for thousands of customers and saving \$500k+ per year.
- **Hands-on AI/GenAI Builds:** Designed and shipped two live, publicly deployed AI apps: multi-agent finance (CrewAI, Groq LLaMA) and RAG document assistant (OpenAI/Anthropic, Qdrant), applying governance on integration, monitoring, security, privacy, and cost.
- **Paperless Consumer Digital Ecosystem:** Architected a Salesforce-based consumer platform achieving 95%+ customer satisfaction, increased conversion, and measurably reduced cost-to-serve, adopted as a benchmark by major NZ corporates.
- **\$2M+ Annual OPEX Savings:** Delivered \$2M+ annual OPEX savings through platform modernisation, vendor rationalisation, and governance-led optimisation across 8 NZ and Australian entities.

Professional Experience

Independent Consultant

Sep 2023 – April 2026

Self-Employed – multiple countries

Overview: *Advisory and hands-on AI and cloud engineering while travelling. Supporting startups and a NZ technology vendor, and designing, building, and deploying live AI applications.*

- **Advisory:** Supported startups on cloud-native platforms and MVP architectures (AWS, microservices). Informal advisory to a NZ vendor preparing to upgrade their solution for government clients, covering people, process, and technology.
- **Hands-on AI and Cloud:** Built and deployed two live AI applications: AI Finance Agent NZ (CrewAI multi-agent, Groq LLaMA, Streamlit) and a RAG Document Assistant (OpenAI/Anthropic APIs, Qdrant vector DB, Streamlit Cloud) covering ingestion, embeddings, retrieval, and grounded generation with cost controls. Also built an orbital flight physics simulator (Canvas, 60Hz integration). Code at github.com/jesuinoazevedo.

Solutions Architect

Mar 2021 – Aug 2023

Vector Limited, Auckland

Overview: Working on the next-generation grid platforms on Vector's partnership with Google (Alphabet X). I owned architecture governance, cross-domain design, and integration alignment across a regulated, complex environment. Also had the added responsibility to architecturally lead the work on a core electricity value stream.

- **Target State Architecture & Roadmapping:** Defined target-state architecture and multi-year technology roadmaps aligned to business goals. Established NFRs and standards across cloud, integration, and applications, improving delivery consistency and reducing duplication.
- **Architecture Runway, Cloud & Data:** Defined the architecture runway for Vector's digital grid initiative with Google, covering data platform design and multi-cloud (AWS/GCP) architecture. Provided governance and scalability foundations across the programme.
- **ML-Driven Predictive Maintenance:** Designed and oversaw delivery of a machine-learning solution using SAP asset data to shift maintenance from reactive to predictive, reducing electricity outages affecting thousands of customers and delivering \$500k+ in annual savings.
- **AI/GenAI Governance & NFR Leadership:** Embedded architecture governance and NFRs across AI-adjacent workstreams, covering integration, monitoring, security, privacy, and cost. Carried this approach into recent hands-on AI builds.
- **Microservices, DDD & Integration Patterns:** On the electricity value stream I applied microservices and domain-driven design patterns across integration and API architecture, enabling reuse, faster decision-making, and clearer service boundaries.

Digital Transformation & Services Manager

Mar 2019 – Mar 2021

Vector Limited, Auckland

Overview: I led digital transformation across 8 companies in NZ and Australia, covering over 1,000 users across 30+ locations. Owned critical technology delivery and investment decisions during a high-pressure period, maintaining governance, cost discipline, and executive alignment.

- **COVID Response & Board Recognition:** Delivered a fully remote digital workplace enabling operational continuity across critical infrastructure, gas and electricity, during COVID, including rapid rollout across all sites in a regulated environment. Earned formal Board recognition for execution quality and leadership under pressure.
- **Cost Optimisation & Investment Governance:** Delivered \$2M+ annual savings through platform modernisation and vendor rationalisation, applying strong governance to all spend decisions. Prioritised investments based on value and risk, balancing innovation with cost efficiency across the group.
- **Transformation Leadership & Change Governance:** Partnered with executive stakeholders to define and lead large-scale digital transformation initiatives, aligning platform strategy with business priorities. Established change governance processes and drove organisation-wide adoption across all 8 business entities, ensuring consistent rollout across locations with minimal operational disruption.
- **Execution & Strategic Alignment:** Delivered initiatives end-to-end, turning strategy into outcomes. Built strong executive relationships and communicated clearly across technical and business audiences, making sure investments landed.

End-User Compute & Collaboration Manager

Jun 2018 – Mar 2019

Vector Limited, Auckland

Overview: I was accountable for the budget, architecture, reliability, and full lifecycle of end-user and collaboration platforms supporting 1,000+ staff across 30+ locations in NZ and Australia. Delivered a resilient foundation for all 8 businesses.

- **Workplace Transformation:** Led the shift from a 90% desktop to a fully mobile, laptop-based workforce, preparing the organisation for large-scale remote operations, scaling platforms for a distributed user base, and modernising the end-user experience across all sites and business entities.
- **Platform Strategy & Service Ownership:** Defined and owned the platform strategy for end-user compute and collaboration services, establishing a resilient and secure digital workplace foundation across 8 companies. Maintained full accountability for service delivery, reliability, and improvement across the portfolio.
- **Financial Stewardship:** Oversaw strategic allocation and optimisation of a technology budget exceeding \$10 million, balancing innovation investment with operational cost efficiency across a multi-entity group, applying the same commercial discipline carried forward into the Digital Transformation & Services Manager role.
- **Vendor Governance:** Managed a portfolio of 10+ tier-one vendors, applying structured governance frameworks to drive performance, accountability, and commercial value across mission-critical service contracts, negotiating terms that improved cost and delivery outcomes for the group.

2IC Infrastructure Manager & DevOps Team Lead

Oct 2015 – Jun 2018

Vector Limited, Auckland

Overview: I was 2IC for the Infrastructure portfolio, leading a vendor-based DevOps team of over 100 people across NZ's largest energy provider. Accountable for the performance and 24/7 availability of enterprise server, storage, and network environments.

- **Operational Excellence:** Developed and executed a process improvement strategy that reduced significant incidents from 36 to 8 per year (77% over 18 months) by introducing structured governance, clear escalation paths, proactive monitoring, and a measurable shift in team accountability and performance culture.
- **Commercial Optimisation:** Achieved over \$1M in annual OPEX savings (over \$7M cumulative) through vendor consolidation, contract negotiation, automation, and modernisation of the technology stack.
- **DevOps & Agile Delivery:** Led a vendor-based team in implementing CI/CD pipelines, Infrastructure as Code (IaC), and automation practices across the infrastructure portfolio, driving a culture shift toward reliable, automated delivery, reducing manual toil, and enabling faster, more consistent deployments.
- **Infrastructure Ownership:** Managed the full-service lifecycle for all server, virtualisation, network, and performance optimisation layers, ensuring 24/7 availability and system reliability for critical operational systems supporting NZ's energy network across multiple sites and environments.

IT Specialist (Solutions Architecture)

Nov 2013 – Oct 2015

Vector Solar (HRV), Vector Group, Auckland

Overview: I architected and built Salesforce-based consumer digital solutions that won industry awards and were adopted as a benchmark by major NZ corporates. Designed integrated platforms connecting customer, operational, and back-office systems.

- **Consumer Web & Mobile Architecture:** Designed an end-to-end consumer digital platform across web, mobile, and back-end systems. Integrated Salesforce, SAP, and field service in a single ecosystem with consistent visibility across sales, service, and fulfilment.
- **Paperless Platform & Automation:** Architected a fully paperless digital ecosystem with automated workflows that reduced cost-to-serve and supported rapid growth without proportional cost increase. Adopted as a reference model across major NZ corporates.
- **Customer Outcomes & Conversion:** Achieved 95%+ customer satisfaction and measurable lifts in conversion through improved digital experience, faster service response, and integrated system design, cutting lead conversion cost by 50%.

Head of Technology

Oct 2004 – Oct 2013

Madeira Ports (APRAM), Portugal

Overview: I managed mission-critical technology supporting maritime logistics and port operations in a regulated public sector environment. Delivered 99.99% uptime across high-pressure transport systems for 400+ users while optimising OPEX and CAPEX over nine years.

- **Architecture Ownership:** Defined and maintained core technology architecture supporting national port operations, including maritime logistics, vessel management, and regulatory reporting. Managed SAP administration, enterprise integrations, and infrastructure in a complex, regulated environment.
- **Service Reliability & System Performance:** Sustained 99.99% uptime across mission-critical infrastructure through process improvement, redundancy design, and proactive monitoring. Maintained system reliability under demanding availability requirements in port operations.
- **Vendor & Technology Governance:** Managed vendor relationships and governed ICT investment decisions over nine years, delivering solutions within strict security, compliance, and public sector frameworks, balancing operational agility with regulatory accountability.
- **Technology Strategy:** Aligned ICT investment with public sector mandates and operational priorities over nine years. Built and evolved long-term technology capability within a tight budget.

Hobbies and Free Time

Active volunteer with Forest & Bird, Auckland Regional Parks, and Ark in the Park.
